

Drupal 7 modules lesson 2 homework

1. Install and enable views and views_ui and entityreference modules
2. Create drupal_lab_site module with files :
drupal_lab_site.info
drupal_lab_site.install
<https://www.drupal.org/docs/7/creating-custom-modules/writing-module-info-files-drupal-7x>
3. In drupal_lab_site.install file write hook_update_n(), in this hook enable views, views_ui and entityreference modules (read documentation “How to enable modules via hook_update_n()”)
4. Create “Product” content type with fields:
Title (textfield)
Body (textarea)
Image (image)
5. Create “Product review” content type with fields:
Title (textfield)
Body (textfield)
Image (image)
Product (type entity reference, target type ‘node’, target bundle ‘Product’).
6. Create views page ‘Products ‘ with path ‘/products’
7. View should display Grid with products and separate grid should display fields:
Product title (link to product detail page)
Product body
Product image (Image style 480x480)
Product review title (link to product review detail page)
Product review image (Image style 100x100)

Good Luck!
