

## HM #8

Max points – 20

### To do:

1. Install Drupal with Docker 4 Drupal.
2. Install and configure View, Pathauto, Ckeditor.
3. Create content type CAR (Image, title, other fields for filtering).
4. Create page with filters “Search Car”.
5. Add 10 filters, try to use different types of field.
6. Added user username: **manager\_example**, pass: **pass1**
7. Added role manager with access only for add/edit/remove cars.
8. Configure admin ui for using site by manager role.

Expected: codebase, files, db in repo and
