HM #3
Max points – 20

To do:

1) Using HTML, CSS and JavaScript create GRUD application
- C – create
- R – read
- U – update
- D - Delete

For example (add your own styles):

2) No need to use PHP
3) No need to use gulp, grunt, webpack
4) No need to use any CSS frameworks.
5) No need to use Sass or Less.
6) Separate CSS to different file with name style.css
7) Put .js files in to js folder
8) If need, link fonts via: https://fonts.google.com/ or download and put it to separate folder
9) Basic folders structure. Create HM3 folder

10) Provide some page screenshots
11) Commit and push your HM3 folder with all files to the new **hm3** branch

Please, use **ES6 or highest**. Write small and pretty code.

That is all.
Good luck.
